

SEA-CROP®

Nature's Gift to Agriculture

Healthy cattle on Abe Collins' Sea-Crop® improved pasture.

"In the nine years that I have used Sea-Crop® on my own and client's crops, grasslands and livestock, I have always seen powerful yield, quality and health responses. Like any land manager, I do nothing in isolation - I am always operating in the context of soil life, plants, grazing animals, financial restraints and opportunities and the needs of people I work with. Sea-Crop® consistently strengthen this whole web, from the plants and soil on up. The support and insight Ambrosia Technology has provided me along the way has always been rapid and deep. I couldn't ask for a better product or better service, and I consider Sea-Crop® to be an irreplaceable input for my work in growing topsoil, healthy livestock and producer success."

- Abe Collins, Collins Grazing, LLC, Saint Albans, Vermont

Every naturally occurring element on planet earth is found in seawater. The 90 elemental minerals and the compound minerals contained in Sea-Crop® are in ionic form, ready for immediate use by plants and soil microflora. Sea-Crop® is a unique product made by proprietary process that removes 95% of the sodium chloride and concentrates the trace and ultra-trace minerals plus the active marine microbes and organic compounds.

A unique source of 90 naturally occurring elemental minerals and 50,000 organic compounds

"Every farmer needs to use Sea-Crop®."
