

SEA-CROP® Ocean Mineral Concentrate

95% sodium reduced

COMPOST TEA brewed with Sea-Crop® has over twice the microbial content. Only one part in three hundred added to the brew is needed to achieve this result. That is less than ½ ounce to the gallon of compost tea.

Foliar applications of compost tea made this way to fruit orchards, together with additional Sea-Crop®, have resolved conditions that previously could not be resolved.

In the presence of the 90 elemental minerals contained in Sea-Crop®, microbes can form desirable enzymes and life can thrive.

Dave Olson in Clarksburg, California has had great success using Sea-Crop® as an input when brewing microbial inoculants.

*Microbial Inoculants for Agriculture
Made by Farmers for Farmers*

"Sea-Crop has been an excellent complement to our microbe inoculant brewing formulation. Sea-Crop's huge range of dissolved nutrients have had a very positive effect on our microbe populations. Including Sea-Crop has enhanced our microbe diversity and significantly boosted our populations which recently reached over 1 Trillion microbes/ml (1×10^{12})."

"We also include Sea-Crop in most of our crop programs as it has similar outsized beneficial impacts on our crops as well." ~ Dave Olson

Registered under the NOP for unlimited use in ORGANIC agriculture (CDFA and WSDA).
